

	<p>Note that the user_ids list will totally overwrite the former list of users.</p> <p>Returns a JSON object with is_error (boolean), error_msg (possibly empty string). If is_error is false, also returns the group subobject that was updated.</p>
DELETE /groups/{group_id}	<p>Deletes the group with the given group_id, so long as it exists.</p> <p>Returns a JSON object with is_error (boolean), error_msg (possibly empty string).</p>
POST /users/{user_id}/ editablePermissions	<p>Adds the specified set of permissions. user_id must be the id of the calling user. This will reset all permissions the user could see, and set them to be the input JSON object. For formatting of JSON, see the evolution 2 brainstorm at the top of this document.</p>
GET /users/{user_id}/ editablePermissions	<p>Returns all permissions viewable to the calling user. User_id must be the same user as the caller. For the JSON response format, see the evolution 2 brainstorm at the top of this document.</p>
